Lab1-CS 470: (Operating Systems)
Winter 2023
Instructor: Solmaz Seyed Monir

<div align="center">

Lab1- Introduction to Linux

Scoring: 20 pts

**Please complete Tutorials 1 and 2 before starting the lab assignment.
This assignment is an individual submission.**

</div>

Activity Results: This lab teaches you the following topics:

* ❖ Ubuntu Installation
* ❖ Overview of operating systems
* ❖ Introduction to Linux

1. Install **Oracle VirtualBox and Ubuntu** on your system.
2. Using a keyboard shortcut, launch Ubuntu terminal. Ctrl-Alt-T
3. date command: The date command displays the system date and time.
4. who command: The who command is a tool that prints information about currently logged-in users.

How do I submit my assignment?

1. Take a screenshot of your terminal and paste it into a word document, then save it as a pdf.
2. Make a folder in your host operating system called OS470 lab-assignments and save your first lab in that folder.
3. Upload your pdf file to your repository "CS-OS-470-labs" from Tutorial 1 is in our repository for this class.

README.md

CS-OS-470-labs

GitHub repository for CS-OS-470 lab assignments

4. Upload a URL repository to the canvas.
